Questions from shareholders

Question 1 The Company's gross profit margin (% GP) since 2015 has continuously decreased. Was raw material shortage still a problem affecting the gross margin? How did the Company manage this matter?

Answer Important factors which affected the Company's gross margin included 1) Foreign exchange rates from the expansion of the Internet of Things (IoT) business in our regional business, which originally less than 20%. As a result, sales in our regional business group was highly affected by the currency conversion. 2) Material shortage since 2018. 3) In Quarter 4, the high gross profit of high-end products was affected by the trade war between the USA and China. The Company believed this would be a temporary effect. However, the Company tries to manage the situation by increasing the IoT product gross profit margin and expanding production and sales of high-end solutions and product.

Question 2 At present, the world economy has been declining. It could be difficult for the Company to increase export capacity for high-end products. Does the Company have confidence for gross margin improvement? Would it continue to be like this until the world economy improves?

Answer If there is no exchange rate affect, the Company's operating results should be better. The world economy presented the Company with pros and cons. The good news for this year was the Company received more orders from China due to the Trade War. However, those orders were low-margin products. If this situation occurs in the short term, the gross margin would not increase much. Therefore, it is difficult to tell whether the gross margin of the second half will be better than the first half of this year.

The Meeting acknowledged the Company's operating results for the fiscal year 2018.
